

Consent Form For Excision Of Chalazion								
Patient Name	:	Alston Rebello		Emirates ID	:	784-1991-2906159-3		
File No	:	17	DOB	:	1996-06-20	Nationality	:	Indian
Gender	:	Male	Doctor's Name	:	Alan Alfred	Date	:	2025-02-21

NAME : Alston Rebello
MR NUMBER : 17

EXCISION OF MULTIPLE CHALAZION

CONDITION AND PROPOSED TREATMENT

My ophthalmologist has evaluated me and diagnosed with a chalazion, which is a localized inflammatory response involving sebaceous glands of the eyelid that occurs when the gland duct is obstructed. A chalazion may resolve spontaneously or with warm compresses, lid scrubs, and lid massage. When there is no improvement, the chalazion may be incised and drained. After local anesthesia, a chalazion instrument is put in place and an incision is made in the inner aspect of the eyelid. The contents of the chalazion are then carefully drained with a curette followed by gentle pressure or heat to control any bleeding.

RISKS AND COPMLICATIONS :

No procedure is entirely risk free. Adverse effects from incision and drainage of chalazion may include:

- 1. Infection - Infections can be treated with topical or oral antibiotics
- 2. Bleeding - Normally controlled with gentle pressure or heat cautery at the incision site.
- 3. Pain - Minimal and resolves with healing of incision.
- 4. Recurrence - Chalazion may recur if incomplete excision.
- 5. Loss of lashes in the involved area .
- 6. Eyelid notching in the area of the inflammation .
- 7. Damage to the globe from the scalpel, needle used to inject the anesthetic, or cautery instrument.
- 8. Vision loss, including blindness.

CONSENT FOR TREATMENT :

By signing below I acknowledge that I have read and understand the above and have had my questions answered by the surgeon to my satisfaction. I consent to the incision and drainage of the chalazion.

Sign here, only if all of your questions have been answered to your satisfaction
